Vlad Uilecan
Bluetooth QA Manager

Dear hiring manager,

I am writing to strongly recommend Daniel Beckman for any engineering related position, quality assurance, project management, or team leadership that he may be seeking. I had the pleasure of working with Daniel for 6 months in the Bluetooth QA team at Apple. His role was of Career Experience Engineer.

Daniel possesses a unique blend of humor, intelligence, and technical proficiency that makes him stand out. His ability to think outside the box has been invaluable in our projects, particularly in the case of Velocity automation projects and HomePods racks buildup initiatives. Daniel has a great hands-on experience with Raspberry Pi automation and watchOS and iOS UI automation. He's also comfortable working with wireless lab tools (including bluetooth sniffers) as well as with robotics. All of these have significantly contributed to the success of our projects.

Moreover, Daniel is an exemplary team player. His positive demeanor and natural charisma have a tangible effect on the morale and productivity of our team. He has the rare ability to elevate the mood and spirit of those around him, making our work environment both enjoyable and efficient. Daniel's willingness to assist colleagues and contribute to multiple aspects of our projects, from data gathering to test results analysis and automation deployment, demonstrates his strong sense of teamwork in cross-functional teams. He has been an asset not only in functional testing but also in automation testing and reporting for the Bluetooth watchOS team.

Daniel's adaptability is another of his strengths. He has seamlessly transitioned between projects, providing substantial contributions wherever needed. Whether assisting our location team on special projects or pivoting to support our Bluetooth initiatives, Daniel has shown exceptional versatility and commitment.

One of Daniel's most notable contributions was his leadership in developing automation solutions for our watchOS Bluetooth team. He took the initiative to integrate a Raspberry Pi with a microcontroller for cycling tests, an innovative approach that has proven invaluable. His ability to independently lead projects, assign his own tests, and report results efficiently speaks volumes about his initiative and reliability.

In conclusion, Daniel Beckman is a remarkable individual and professional. His technical abilities, combined with his positive attitude and ability to work well with others, make him a rare find. I am confident that he will bring the same level of dedication, innovation, and team spirit to any organization fortunate enough to have him.

Please feel free to contact me if you require further information or clarification regarding Daniel's qualifications and past contributions.

Sincerely yours,

Vlad Uilecan
